# Get Smart with the erwin EDGE

Unleashing Potential and Value

erwin
the data governance company

The erwin brand has been the gold standard in data modeling for more than 30 years. As a stand-alone company, we're focused on **data governance** as a strategic approach and underlying technology for operational excellence, competitive differentiation and risk mitigation. Through strategic acquisitions and significant investment in R&D, we've developed the only software platform with integrated enterprise **modeling, data cataloging and data literacy** capabilities to help customers discover, understand, govern and socialize their data assets to achieve the desired operational results while reducing data-related risks.

The **erwin EDGE** platform creates an **"enterprise data governance experience"** to give organizations visibility and control over their disparate architectures and all the supporting data. The broadest set of metadata connectors and automated data mapping, code generation and cataloging tools combine data management and data governance processes in an automated flow, with upstream and downstream data lineage, to reduce errors and increase the speed and quality of the data pipeline. Both IT and business stakeholders have role-based, self-service access to the information they need to collaborate in making strategic decisions. This **data intelligence** unlocks potential and value. So the hallmark of the intelligent enterprise is IT and business collaboration, where data governance is everyone's business because it drives actionable, data-driven insights for agile innovation, business transformation and risk management.

The erwin EDGE connects critical data and business architectures to accelerate the speed to meaningful insights that produce operational results while mitigating data-related risks.
